Introduction

This introduction is not part of the import health standard (IHS), but is intended to indicate its general effect.

Purpose

This IHS describes the phytosanitary requirements that must be met for imported sawn wood to be given biosecurity clearance into New Zealand.

Background

This IHS has been developed under the requirements of the Biosecurity Act (1993) and in regard to New Zealand's obligations under the International Plant Protection Convention (1997).

This amendment contains no change in content, but is issued in the new Ministry for Primary Industries (MPI) format for IHS.

Who should read this?

This IHS applies to all importers of sawn wood.

Why is this important?

It is the importers responsibility to ensure the risk goods comply with the requirements of this IHS (section 16B of the Act). Risk goods that do not comply with the requirements of this IHS may not be cleared for entry into New Zealand.

Risk goods that do not comply with the requirements of this IHS may be directed for treatment, re-shipment, destruction or further action deemed appropriate by the Chief Technical Officer (CTO). The pathway may be suspended, if certain types of viable regulated pests are intercepted on the consignment.

Importers are liable for all associated expenses.

Equivalence

A CTO may consider an equivalent phytosanitary measure, once that measure is proven to maintain at least the same level of protection assured by the current measures in this IHS.

Equivalence is determined in accordance with ISPM 24 (*Guidelines for the determination and recognition of equivalence of phytosanitary measures*).

Other information

Compliance with the provisions of this IHS does not absolve the importer of the need to comply with other laws relating to or prohibiting the importation of goods (e.g. Trade in Endangered Species Act 1989, Customs and Excise Act 1996).

As specified in the Hazardous Substances and New Organisms Act (1996), proposals for the deliberate introduction of new organisms (including genetically modified organisms) as defined by the Act should be referred to the [Environmental Protection Authority](#).

Part 1: Requirements

1.1 Application

- (1) This import health standard (IHS) describes the phytosanitary requirements that must be met for sawn wood to be given biosecurity clearance into New Zealand.

1.2 Incorporation by reference

- (1) This IHS has been developed under the requirements of the Biosecurity Act (1993) and in regard to New Zealand's obligations under the International Plant Protection Convention (1997)
- (2) This IHS refers to the following documents:

[MPI's Biosecurity Organisms Register for Imported Commodities \(BORIC\)](#)

[International Standard for Phytosanitary Measures](#)

ISPM 5 (*Glossary of Phytosanitary Terms*)

ISPM 12 (*Guidelines for Phytosanitary Certificates*)

ISPM 24 (*Guidelines for the determination and recognition of equivalence of phytosanitary measures*).

1.3 Definitions

- (1) Refer to Appendix 2.

1.4 Biosecurity clearance

- (1) If the requirements of this IHS have been met, and regulated pests are not detected or are successfully treated following interception/detection, biosecurity clearance may be given.

Part 2: Specific Requirements

2.1 Commodity description

- (1) The commodity description is all sawn wood is no larger than 300mm in thickness (any width is acceptable).

Guidance

- Sawn wood larger greater than the 300mm thickness specified can be imported under the requirements of the IHS for poles, piles, rounds and sleepers.
- Examples of sawn wood covered by this IHS include timber, lumber, half rounds, mouldings, doweling and laminated beams.

2.2 Pest list

- (1) MPI categorises pests associated with forest produce into regulated and non-regulated pests. Where a pest is detected, the regulatory status of this organism can be identified by referring to BORIC.
- (2) A list of common pests associated with sawn wood is identified in Appendix 1 (a) and (b) to this IHS.

2.3 Basic requirements

- (1) All consignments of sawn wood must be:
 - a) free of regulated pests (see Appendix 1 (a));
 - b) packed and/or shipped in a manner that prevents infestation and/or contamination by regulated pests, if packaged prior to shipping;
 - c) relatively free of extraneous material (e.g. leaves, soil);
 - i) a contamination rate up to 0.01% weight/weight extraneous material is acceptable.
 - d) bark-free wood.
- (2) All consignments of sawn wood from *Pinus* species and originating from areas not considered by MPI to be *free of Fusarium circinatum* must be:
 - a) heat treated or kiln dried as stated in Part 2.5 (1)(b); or
 - b) chemically treated for full fungicidal protection as stated in Part 2.5 (1)(c).
- (3) All consignments of sawn wood from Fiji, the Solomon Islands and Papua New Guinea will be 100% "break bundle" inspected, or tent-fumigated and inspected on arrival in New Zealand as prescribed by the options stated in Part 2.6 (5).

2.4 Treatment

- (1) All treatments completed prior to import must comply with the requirements of this IHS.
- (2) All consignments of sawn wood that are fumigated or heat-treated prior to export must not be treated more than twenty-one (21) days before export to New Zealand.

2.5 Treatment options

(1) Treatment options are as follows:

- a) Fumigation with methyl bromide or sulphuryl fluoride of filleted (separated vertically or horizontally by a minimum of 5mm of airspace in one dimension, every 200mm) at:
 - i) 80 g/m³ for more than 24 continuous hours, and in a minimum temperature of 10°C.
- b) Heat treatment (or kiln drying) at a minimum continuous core temperature of 70°C for more than 4 hours.
- c) Chemical preservation for sawn wood must be to full sapwood penetration as specified in the following table:

Chemical	Minimum Retention
Boron compounds (<i>insecticidal and limited fungicidal protection</i>)	0.1% Boric Acid equivalent minimum loading in the sapwood core
Copper + didecyldimethyl ammonium chloride (DDAC) (<i>insecticidal & fungicidal protection</i>)	0.35% mass/mass OR 2.8 kg/m ³ in softwood timbers, 5.60 kg/m ³ in hardwood timbers.
Copper azole (<i>insecticidal & fungicidal protection</i>)	0.27% mass/mass OR 1.35 kg/m ³ in softwood timbers, 2.7 kg/m ³ in hardwood timbers.
Copper Chrome Arsenic (CCA) (<i>insecticidal & fungicidal protection</i>)	0.27% mass/mass OR 3kg/m ³ minimum preservative retention
Arsenic (<i>insecticidal protection only</i>)	0.04% minimum preservation loading in sapwood core
Permethrin (<i>insecticidal protection only</i>)	Minimum retention of not less than 0.06% mass/mass

2.6 On-arrival verification

- (1) Certificates accompanying a consignment and submitted as clearance documentation must reconcile with the actual consignment.
- (2) If original and appropriate certification is NOT provided, the consignment will be considered untreated.
- (3) All consignments that are NOT packaged in a manner considered by MPI to adequately protect the goods from re-infestation after treatment, or were NOT shipped within the required time period after treatment, will be considered untreated.
- (4) All consignments of untreated sawn wood from *Pinus sp.* and originating from areas not considered to be [free of *Fusarium circinatum*](#) must be heat treated (as per the treatment specifications stated in Part 2.5 (1)(b)), reshipped, or destroyed.
- (5) All consignments of sawn wood from Fiji, the Solomon Islands or Papua New Guinea must (within 12 hours of unloading for break-bulk consignments) be either:
 - a) 100% "break bundle" inspected for ants (each bundle broken sufficiently to detect a single ant colony); or
 - b) tent-fumigated and 100% inspection of the exterior of each stack of sawn wood and a 10% piece by piece (board by board) inspection of each lot.

Note 1: For the above option a), both break-bulk and containerised sawn wood requires tent-fumigation and inspection.

Note 2: For the above option b), kiln-dried (or heat treated) wood does not require a 10% piece by piece (board by board) inspection of each lot.

- (6) All consignments of untreated sawn wood must be:
 - a) inspected for evidence of pests, bark, or extraneous organic material (e.g. leaves, twigs, soil). Inspection includes a 100% inspection of the exterior of each stack of sawn wood and a 10% piece by piece (board by board) inspection of each lot; or
 - b) directed for treatment (heat or chemical treatment).
- (7) Treated sawn wood must be inspected to verify that the treatment was effective and free of contaminants.
- (8) All inspections completed on arrival in New Zealand shall be carried out in a transitional facility approved for that purpose.

2.7 Actions undertaken on the interception/ detection of organisms/ contaminants

- (1) All organisms detected on the sawn wood may be identified at the importers option and expense to determine the regulatory status of the organism.
- (2) If regulated pests are intercepted/detected on the commodity, or associated packaging, the following actions will be undertaken as appropriate (depending on the pest identified, see Appendix 1(a)):
 - a) treatment;
 - b) re-shipment;
 - c) destruction;
 - d) the suspension of trade until the cause of the non-compliance is investigated, identified and rectified to the satisfaction of a CTO.
- (3) Lots contaminated with bark or greater than 0.01% weight/weight soil or other extraneous organic material (e.g. leaves, twigs) shall have the contaminating material removed (if possible), or be treated, re-shipped or destroyed.
- (4) All treatments shall be carried out in a transitional facility approved for that purpose. Consignments treated under direct MPI supervision do not require further inspection under this IHS.

Part 3: Documentation requirements

3.1 Certificates

- (1) An import permit is not required to import sawn wood into New Zealand.
- (2) The importer may use one of the following options for the purpose of providing certification of the treatment status of consignments to be imported into New Zealand:
 - a) Phytosanitary certificate issued by the NPPO and based on the model certificate included in ISPM 12 (*Guidelines for Phytosanitary Certificates*);
OR
 - b) Phytosanitary certificate issued by the NPPO other than the certificate specified in a) to which the following is to be included:
 - i) " *The sawn wood in this consignment has been inspected according to appropriate official procedures and are considered to be free from the regulated pests specified by MPI and to conform to New Zealand's current phytosanitary requirements*";
 OR
 - c) Treatment certificate issued by the manufacturer or operator/manager of the treatment company.
- (3) All certification must be original, free of alterations and erasures, and printed in English.

3.2 Certificate information

- (1) If used, a certificate must contain the following information:
 - a) a full description of the consignment and wood component, including the scientific or common name of the wood type(s);
 - b) all relevant identification marks and brands;
 - c) the number and/or volume of items treated;
 - d) the container number (where applicable); and
 - e) the following additional declarations (where applicable).
- (2) Certificates for consignments that have been fumigated may contain the following declaration:

"The sawn wood has been fumigated with _____ (methyl bromide or sulphuryl fluoride) _____ at _____ (Fumigant concentration (g/m³)) _____ for _____ (Duration of treatment) _____ at a minimum temperature of _____ (Minimum temperature during treatment) _____ on the _____ (Date of treatment (dd/mm/yy) _____."
- (3) Certificates for consignments that have been heat-treated (or kiln dried) may contain the following declarations:

"The sawn wood has been heated for _____ (Duration of treatment) _____ at a minimum core temperature of _____ (Minimum core temperature during treatment) _____ on the _____ (Date of treatment (dd/mm/yy) _____." Or

"The sawn wood has been kiln dried to _____ (Moisture %) _____ percent moisture content at temperatures exceeding _____ (Temperature during treatment) _____ for _____ (Duration of treatment) _____ on the _____ (Date of treatment (dd/mm/yy) _____."
- (4) Certificates for consignments that have been chemically preserved may contain the following declaration:

"The sawn wood has undergone chemical preservation using _____ (active ingredients of preservative) _____ by _____ (method of preservative application) _____ achieving a preservative active ingredient loading of _____ (kg/m³, or weight/weight %, or net dry salt retention) _____."

3.3 Transit

- (1) Consignments must not be opened in transit. Where a consignment is under the direct control of the transit country NPPO and is either stored, split up or has its packaging changed while in transit through that country, en route to New Zealand, a "[Re-export Certificate](#)" is required.
- (2) Where a consignment is held under bond as a result of the need to change conveyances and is kept in the original container, a "Re-export Certificate" is not required.

Appendix 2: Definitions

Bark

The layer of a woody trunk, branch or root outside the cambium [ISPM 5].

Bark-free wood

Wood from which all bark, except ingrown bark around knots, and bark pockets between rings of annual growth has been removed [ISPM 5].

Biosecurity Clearance

A clearance under section 26 of the Biosecurity Act (1993) for the entry of goods into New Zealand.

Commodity

A type of plant, plant product or other regulated article being moved for trade or other purpose. [ISPM 5].

Consignment

A quantity of plants, plant products or other articles being moved from one country to another and covered, when required, by a single phytosanitary certificate (a consignment may be composed of one or more commodities or lots) [ISPM 5].

Contamination

Presence in a commodity, storage place, conveyance or container, of pests or other regulated articles, not constituting an infestation [ISPM 5].

Import health standard

Has the meaning given to it by section 22 of the Biosecurity Act 1993.

Inspection

Official visual examination of plants, plant products or other regulated articles to determine if pests are present and/or to determine compliance with phytosanitary regulations [ISPM 5].

IPPC

International Plant Protection Convention, as deposited in 1951 with FAO in Rome and subsequently amended [ISPM 5].

ISPM

International Standard for Phytosanitary Measures (adopted by IPPC) [ISPM 5].

Lot

A number of units of a single commodity, identifiable by its homogeneity of composition, origin etc., forming part of a consignment [ISPM 5].

MPI

Ministry for Primary Industries (the NPPO of New Zealand).

NPPO

National Plant Protection Organisation. Official service established by a government to discharge the functions specified by the IPPC [ISPM 5].

Organism

As defined by the Biosecurity Act 1993.

Packaging

Appropriate packaging examples are plastic wrapping, 6 sided boxing, closed shipping containers.

Pest

Any species, strain or biotype of plant, animal or pathogenic agent, injurious to plants or animals (or their products) or human health or the environment [ISPM 5].

Pest free area

An area in which a specific pest is absent as demonstrated by scientific evidence and in which, where appropriate, this condition is being officially maintained [ISPM 5].

Phytosanitary measure

Any legislation, regulation or official procedure having the purpose to prevent the introduction and/or spread of quarantine pests, or to limit the economic impact of regulated non-quarantine pests [ISPM 5].

Quarantine pest

A pest of potential economic importance to the area endangered thereby and not yet present there, or present but not widely distributed and being officially controlled [ISPM 5].

Regulated pest

A quarantine pest or a regulated non-quarantine pest [ISPM 5].

Sawn wood

Wood sawn longitudinally, with or without its natural rounded surface, with or without bark [ISPM 5].

Treatment

Official procedure for the killing, inactivation or removal of pests or for rendering pests infertile or for devitalisation [ISPM 5].

Untreated

A consignment where treatment before arrival in New Zealand has not been undertaken

Wood (as a commodity class)

Commodities such as round wood, sawn wood, wood chips and wood residue, with or without bark, excluding wood packaging material, processed wood material and bamboo products. [ISPM 5].
