# 1 Summary

This National Chemical Contaminants Programme report provides a summary of results for raw milk and colostrum sampled over the full 2015/2016 dairy season, spanning the period 1 July 2015 to 30 June 2016, and tested for a range of residues and contaminants.

The purpose of the NCCP is to:

- provide an assurance that not less than 99% of milk produced in New Zealand conforms to New Zealand and international requirements for chemical residues and contaminants;
- establish baseline levels for specific constituents naturally present in milk;
- confirm the accuracy of attestations provided to other competent authorities; and
- investigate unfavourable findings to ensure that controls remain effective and that emerging hazards are identified and appropriate regulatory measures applied.

In addition to the NCCP monitoring of raw milk, dairy products are also sampled and tested for a range of residues and contaminants. These two programmes combine to provide a high level of confidence in the safety and suitability of New Zealand dairy products.

## 2 NCCP Sampling and Testing

### 2.1 WHAT WE TESTED

- 306 raw milk samples were collected over 7 random sampling rounds across the period 1 July 2015 to 30 June 2016 (311 milk samples in 2014/15); and
- 1 targeted colostrum round of 10 samples across the period 1 July 2015 to 30 June 2016 (11 in 2014/15).

All the random sampling of raw milk and colostrum occurs at the farm bulk milk tank prior to any further consolidation, co-mingling or dilution.

### 2.2 WHAT WE LOOKED FOR

More than 500 individual compounds or elements including:

- antibiotics and other veterinary medicines;
- pesticides;
- herbicides;
- fungicides;
- other compounds withdrawn or not permitted for food producing animals;
- aflatoxins;
- incidental contaminants; and
- chemical elements.

In total 167,958 individual test results (excluding the milk integrity results) were obtained for the raw milk and colostrum samples.

#### 2.2.1 Milk Integrity

This report also includes a milk integrity summary that sets out the testing undertaken for compositional characteristics and components or minerals expected in milk. The purpose of

this testing is to confirm that the levels for each component are within the expected range and that no form of adulteration or manipulation of the milk is occurring.

The milk and colostrum milk integrity results are summarised in Table 7.

## 2.3 ACTION LIMITS

Action limits are established for all residues of primary interest in the NCCP. Where maximum residue limits (MRLs) have been set the action limit is typically set at the lowest value applied under New Zealand, Codex and importing country MRLs. Where a compound is not permitted, or not registered for use on milking animals, the action limit is at the minimum laboratory method reporting limit.

For compounds or chemical elements naturally occurring in raw milk the action limits are set to identify unexpected levels that warrant further investigation. While unexpected levels will often be due to natural influences, the investigation aids MPI's understanding of the issue and ensures that no form of adulteration or inappropriate farming practice is occurring.

# 3 Results

## 3.1 RAW MILK

Of the 162,378 individual test results for raw milk (excluding colostrum) there were 148 reported detections (0.09%) above the agreed method reporting limit. No result was above the action limit.

This represents a conformance rate of 100%.

The results are in Tables 1 and 2 and discussed following each table.

## 3.2 RAW COLOSTRUM

Of the 5,580 individual test results for colostrum there were 13 reported detections (0.23%) above the agreed method reporting limit. There was 1 result above the action limit (0.018%):

- 1 detection of DDE (p,p') (0.021 mg/l) above the action limit of 0.02 mg/l.

This represents a conformance rate of 99.98%.

The results are in Tables 1 and 2 and discussed following each table.

### 3.3 DETECTIONS ABOVE ACTION LIMITS

Table 1: Compound detected in colostrum above the action limit

Compound	Matrix	Samples tested	Not detected	Detection above reporting limit	Detection above action limit	Flag	Action limit mg/l	LoR mg/l	Method	Code***
DDE (p,p') ****	Colostrum	10	8	1	1	●	0.02	0.002	GC-MS/MS	P

Notes

\*\*\* Refer Appendix 1 for code

\*\*\*\* Action limit applies to p,p'-DDE and to the sum of p,p'-DDT, o,p'-DDT, p,p'-DDE and p,p'-TDE (DDD) corrected to milk with 4% milkfat

● The reported limit did exceed the action limit threshold

#### 3.3.1 DDE (p,p')

The detection of DDE (p,p') above the action limit was in one colostrum sample at 0.021 mg/l. While the use of DDT in New Zealand agriculture was effectively banned in the early 1970s, the DDE metabolite has been shown to have a very long half-life (in excess of 25 years) in some soils under certain situations. Circumstances that result in higher than normal soil ingestion (such as droughts, use of certain crops or even very wet winters) can, on occasion, result in some animals having a slightly higher exposure. This can show up mainly in the first few milking's. The levels found, and the infrequency of such isolated findings from individual farms, are not likely to result in the bulk silos at processing facilities even coming close to any of the action limits.

### 3.4 OTHER DETECTIONS BELOW ACTION LIMITS

Table 2: Compounds detected in raw milk and colostrum above agreed method reporting limits and below action limits

Compound	Matrix	Samples tested	Not detected	Detection above reporting limit	Detection above action limit	Flag	Action limit mg/l	LoR mg/l	Method	Code***
Abamectin	Colostrum	10	9	1	0	●	0.005	0.002	HPLC-FL	ML
Bismuth	Milk	155	101	54	0	●	No MRL required	0.001	Acid Digest/ICPMS	EL
Bismuth	Colostrum	10	7	3	0	●	No MRL required	0.001	Acid Digest/ICPMS	EL
Penicillin G	Colostrum	10	9	1	0	●	0.004	0.0004	Microbial Inhibition	MIT
Cyanuric acid	Milk	155	153	2	0	●	0.26	0.1	LC-MS/MS	O
Cadmium	Milk	155	136	19	0	●	0.1	0.0002	Acid digest/ICPMS	EL

Lead	Colostrum	10	6	4	0	●	0.2	0.001	Wet oxidation/ICPMS	EL
Tin	Milk	155	154	1	0	●	0.1	0.005	Acid digest/ICPMS	EL
DDE (p,p') ****	Milk	306	269	37	0	●	0.02	0.002	GC-MS/MS	P
Cyantraniliprole	Milk	306	305	1	0	●	0.01	0.002	LC-MS/MS	P
Piperonyl butoxide	Milk	306	305	1	0	●	0.01	0.002	GC-MS/MS	P
Benzyl butyl phthalate (BBP)	Milk	60	59	1	0	●	1	0.1	GC-MS/MS	Pht
Benzylidemethyldecylamm onium chloride (BDM-C12)	Milk	60	59	1	0	●	0.1	0.01	LC-MS/MS	QAC
Bis(2-ethylhexyl) adipate (DEHA)	Milk	60	47	13	0	●	1	0.1	GC-MS/MS	Pht
N-benzylidemethyltetradecylamm onium chloride (BDM-C14)	Milk	60	59	1	0	●	0.1	0.01	LC-MS/MS	QAC

Compound	Matrix	Samples tested	Not detected	Detection above reporting limit	Detection above action limit	Flag	Action limit mg/l	LoR mg/l	Method	Code***
Benzylidimethyldodecylamm onium chloride (BDM-C12)	Colostrum	10	9	1	0	●	0.1	0.01	LC-MS/MS	QAC
N-benzylidimethyltetradecylam monium chloride (BDM-C14)	Colostrum	10	9	1	0	●	0.1	0.01	LC-MS/MS	QAC

#### Notes

\*\*\* Refer Appendix 1 for code

\*\*\*\* Action limit applies to p,p'-DDE and to the sum of o,p'-DDT, o,p'-DDT, p,p'-DDE and p,p'-TDE (DDD) corrected to milk with 4% milkfat

- The amount reported did not exceed the action limit threshold

### 3.4.1 Abamectin

Abamectin is registered for use as a parasiticide for cattle in New Zealand. The detection below the action limit in a colostrum sample is not unexpected.

### 3.4.2 Bismuth

The detections of bismuth were in colostrum and milk samples taken in early lactation. Bismuth is an inert compound used in teat sealants when cows are dried off at the end of lactation. Teat sealant products have been shown to be highly effective in minimising mastitis incidence during the dry period which, in turn, means that there is less reliance on antibiotic treatments during the early stages of lactation.

Many countries exempt bismuth from residue requirements due to its inert nature, and limited use as a veterinary treatment. New Zealand provides an exemption from MRLs for bismuth when used as an oral treatment, or when used as an intra-mammary teat sealant. When used as a teat sealant, the majority of the insoluble plug is removed before the first milking.

Because of its nature, and the low levels of bismuth found, these findings are not considered to be of any concern to public health.

### 3.4.3 Penicillin G

Penicillin G is registered for use as an antibiotic for dairy cows during lactation. The detection below the action limit in a colostrum sample is not unexpected.

### 3.4.4 Cyanuric acid

Cyanuric acid was reported in 2 milk samples below the action limit. The samples were also tested for melamine, with no trace detected, confirming that the detection is not associated with melamine. Cyanuric acid is a known metabolite of several pesticides and agricultural compounds. MPI has previously investigated low level findings and confirmed that these are not linked to any form of milk or feed adulteration.

### 3.4.5 Chemical elements

Cadmium and tin were reported in milk. The reported levels did not exceed action limits. Given the relatively low level of industrialisation in New Zealand there is little heavy metal contamination within the environment. As milking cows primarily graze pasture and receive relatively small quantities of feed from external sources, it has been unlikely for contamination to occur through the feed supply. These results are not unexpected and are below any level that would be of concern in milk or dairy products.

Lead is a ubiquitous environmental contaminant, albeit usually at very low levels in New Zealand. Isolated higher levels are likely to be associated with anthropogenic sources of lead from such uses as historical storage sites for leaded petrol, leaching from lead shot or fishing

lures, ash contamination from incinerators and residues from historical use of lead arsenate insecticides. Appropriate controls and advisories are already in place for most of these potential sources. The levels of lead reported in the milk and colostrum samples were all below the action limits. These results are not unexpected, and are below any level that would be of concern in milk or dairy products.

### 3.4.6 Pesticides

**DDE (p,p')** was reported in 37 milk samples and 2 colostrum samples. Apart from 1 colostrum sample, the reported levels were below the New Zealand MRL of 1.25 mg/kg on a fat basis and below the action limit of 0.50 mg/kg on a fat basis (0.02 mg/l on a 4% fat milk basis) which is consistent with Codex limits.

Metabolites of DDT are periodically identified very early in lactation from animals grazing land where DDT was historically applied to control grass grub (*Costelytra zealandica*). In 1970, New Zealand became one of the first countries in the world to ban the use of DDT on pastoral land. Most commonly residues of DDE, which can have a half-life in excess of 25 years in some soils under certain conditions, are identified, rather than the parent compound DDT. This confirms historic use rather than recent use of this pesticide in New Zealand.

**Cyantraniliprole** is registered in New Zealand for use as an insecticide for the control of certain insect pests in fodder brassicas. Cyantraniliprole was reported in 1 milk sample. The reported level did not exceed the action limit and was below the Codex MRL of 0.02 mg/l.

**Piperonyl butoxide** is registered for use in an insecticide for the control of New Zealand cattle ticks (*Haemaphysalis longicornis*), lice or biting flies on cattle in New Zealand. The detection below the action limit in a milk sample is not unexpected.

### 3.4.7 Phthalates

**Bis(2-ethylhexyl) adipate (DEHA)** was reported in 13 milk samples and **benzyl butyl phthalate (BBP)** was reported in 1 milk sample. The reported levels did not exceed action limits. The action limit for DEHA has been established based on levels of the compound reasonably expected to be found in milk or dairy products, though DEHA is not a phthalate of high concern. DEHA has replaced DEHP in some food contact materials (such as milking cup liners) and so detections are not unexpected, but at low levels only. BBP is a phthalate ester that is ubiquitous in the environment. BBP is mainly used as plasticiser in PVC and other polymer materials.

### 3.4.8 Quaternary Ammonium Compounds (QACs)

**Benzylidimethyldodecylammonium chloride (BDM-C12)** and **N-benzylidimethyltetradecylammonium chloride (BDM-C14)** were both reported in 1 milk sample and 1 colostrum sample. The reported levels did not exceed action limits. QACs are widely used as surfactants and disinfectants and several products have been approved for sanitising dairy equipment. For a number of years dairy maintenance compounds containing QACs have been approved in New Zealand with the condition that milk contact surfaces are to be rinsed after use.

## 3.5 OTHER TOOLS TO SUPPORT THE NCCP

All testing under the programme is also supported by on-farm verification of milking practices (under MPI direction) to give further confidence that New Zealand dairy farmers are protecting the quality and integrity of the milk they produce.

## 4 Conclusion

The practice of sampling raw milk and colostrum at the farm, prior to consolidation through collection and processing, allows for conclusions to be made with respect to New Zealand farmer compliance with both Good Agricultural Practice (GAP) and Good Practice in the Use of Veterinary Drugs (GPVD)<sup>1</sup>. As with previous years, these results provide a high level of confidence that New Zealand has appropriate controls in place to ensure its milk and milk products will continue to consistently meet both the New Zealand and the relevant international standards for chemical residues and contaminants.

Furthermore, the Ministry for Primary Industries has a standard policy that requires all unusual or unexpected results, regardless as to whether it they came from a government or industry sample, to ascertain the potential cause and initiate either local or system corrective actions as appropriate.

The overall rate of all detections (above the agreed method reporting limits) continues to be very low, and in the 2015/2016 year was 0.10%. This is within the range of the overall rate of detections reported in previous years (0.05% in 2014/15, 0.07% in 2013/14, 0.07% in 2012/13, 0.06% in 2011/12, 0.08% in 2010/11, 0.13% in 2009/10 and 0.12% in 2008/09).

## 5 Results

### 5.1 RAW MILK RESULTS – DETECTIONS

Table 3: Compounds detected in raw milk above agreed method reporting limits

Compound	Matrix	Samples tested	Not detected	Detection above reporting limit	Detection above action limit	Flag	Action limit mg/l	LoR mg/l	Method	Code***
Benzyl butyl phthalate (BBP)	Milk	60	59	1	0	●	1	0.1	GC-MS/MS	Pht

#### Notes

\* No trace reported below the LoR by the laboratory

\*\* Set at method LoR

\*\*\* Refer Appendix 1 for code

\*\*\*\* Action limit applies to p,p'-DDE and to the sum of p,p'-DDT, o,p'-DDT, p,p'-DDE and p,p'-TDE (DDD) corrected to milk with 4% milkfat

● The amount reported did not exceed the action limit threshold

● The reported limit did exceed the action limit threshold

## 5.3 COLOSTRUM RESULTS – DETECTIONS

#### Notes

\* No trace reported below the LoR by the laboratory

\*\* Set at method LoR

\*\*\* Refer Appendix 1 for code

\*\*\*\* Action limit applies to p,p'-DDE and to the sum of o,p'-DDT, o,p'-DDT, p,p'-DDE and p,p'-TDE (DDD), corrected to milk with 4% milkfat

● The amount reported did not exceed the action limit threshold

● The reported limit did exceed the action limit threshold

## 5.5 MILK INTEGRITY

**Table 7: Raw milk and colostrum milk integrity results**

Compound	Matrix	Samples tested	Not detected	Present at or within expected limits	Present outside expected limits	Flag	Expected limit	Min	Max	Method	Code
Aluminium	Milk	155	133	22	0		max. 1.0 mg/L	n.d.	0.6616	Acid digest/ICPMS	EL
Aluminium	Colostrum	10	9	1	0		max. 0.25 mg/L	n.d.	0.2132	Acid digest/ICPMS	EL
Boron	Milk	155	7	147	1	●	max. 1.0 mg/L	n.d.	1.0723	Acid digest/ICPMS	EL
Boron	Colostrum	10	7	2	1	●	max. 1 mg/L	n.d.	1.3389	Acid digest/ICPMS	EL
Chromium	Milk	155	153	2	0		max. 0.2 mg/L	n.d.	0.0044	Acid digest/ICPMS	EL
Chromium	Colostrum	10	10	0	0		max. 0.2 mg/L	n.d.	n.d.	Acid digest/ICPMS	EL
Cobalt	Milk	155	153	2	0		max. 0.1 mg/L	n.d.	0.0369	Acid digest/ICPMS	EL
Cobalt	Colostrum	10	8	2	0		max. 0.1 mg/L	n.d.	0.0062	Acid digest/ICPMS	EL
Copper	Milk	155	0	152	3	●	max. 0.15 mg/L	0.008	0.2461	Acid digest/ICPMS	EL
Copper	Colostrum	10	0	9	1	●	max. 0.15 mg/L	0.0251	0.1875	Acid digest/ICPMS	EL
Iodine	Milk	155	0	155	0		max. 1.5 mg/L	0.0021	0.373	TMAH Digestion/ICPMS	EL
Iodine	Colostrum	10	0	10	0		max. 1.5 mg/L	0.0016	0.2074	TMAH Digestion/ICPMS	EL
Iron	Milk	155	153	2	0		max. 5.0 mg/L	n.d.	0.5484	Acid digest/ICPMS	EL
Iron	Colostrum	10	9	1	0		max. 10 mg/L	n.d.	7.8456	Acid digest/ICPMS	EL
Selenium	Milk	155	5	150	0		max. 2.0 mg/L	n.d.	0.0473	Acid digest/ICPMS	EL
Selenium	Colostrum	10	0	10	0		max. 2 mg/L	0.0101	0.0796	Acid digest/ICPMS	EL
Urea	Milk	306	0	306	0		min. 7.0 and max. 70 mg/dL	8.4	58.8	FTIR	MC
Zinc	Milk	155	0	155	0		max. 10 mg/L	2.2538	9.2306	Acid digest/ICPMS	EL
Zinc	Colostrum	10	0	10	0		max. 25 mg/L	3.5932	23.6391	Acid digest/ICPMS	EL
IgG1	Colostrum	10	0	10	0		min. 2.0 g/L	4.89	25.34	ELISA	MC
Sodium thiocyanate	Milk	60	7	53	0	●	max. 20 mg/L	n.d.	13	HPLC-UV	O
Total		1861	654	1201	6						

**Notes**

n.d. Refers to not detected at the test methods limit of detection or outside the calibration range for the component

● Results outside the expected limit or range of expected limits

# 6 Appendices

## 6.1 CODE AND METHOD INFORMATION

Table 8: Test method descriptions

Method	Description
Copan	Antimicrobial screening test using Copan Milk Test
ELISA	Enzyme-linked immunosorbent assay
GC-ECD	Gas chromatography – electron capture detection
GC-MS/MS	Gas chromatography - mass spectrometry
HPLC	High-performance liquid chromatography
HPLC-FL	High-performance liquid chromatography with fluorescence detection
HPLC-UV	High-performance liquid chromatography with ultraviolet detection
ICPMS	Inductively coupled plasma mass spectrometer
LC-MS/MS	Liquid chromatography tandem mass spectrometry
Microbial Inhibition	Screen test using 4-plate microbial inhibition test (plate bioassay)

Table 9: Compound and compound group codes

Code	Compound or compound group
A6	An 'unauthorised substance' as listed in Annex 1, Group A (6) of Directive 96/23/EC
AF	Aflatoxins
B	Benzimidazoles
C	Dicyandiamide (DCD)
D	Dexamethasone
EL	Chemical element
IS	Inhibitory substance
ML	Macrocyclic lactones
N	Nitrofurans
NS	Nonsteroidal anti-inflammatory drugs (NSAIDs)
O	Other - cyanuric acid, melamine, glyphosate, 1080, sodium thiocyanate
P	Pesticides
PC	Polyether coccidiostats
Pht	Phthalates
QAC	Quaternary ammonium compounds

## 6.2 SUMMARY OF YEAR ON YEAR TESTING

Table 10: Summary of samples tested and overall rate of detections by year

Season	No. milk samples	No. colostrum samples	Overall rate of detections
2015/16	306	10	0.10%
2014/15	311	11	0.05%
2013/14	311	28	0.07%
2012/13	317	29	0.07%
2011/12	303	47	0.06%
2010/11	329	40	0.08%
2009/10	321	40	0.13%

Figure 1: Summary of overall rate of detections by year
